- [Cyber Security Course In Extraordinary Thinkers](#)

PROJECTS

POLICEPRONET

I have created a web application for police departments to manage and streamline their administrative tasks. This application handles and releases licenses, processes payments for licenses, submits complaints, and provides detailed information about police departments.

→ [Show in github](#)

URBAN FOOD

I have developed an e-commerce platform specialized in food products. Using MongoDB and MySQL with Node.js, the site supports seamless product management, including image manipulation for rich product displays. It features secure exits and backend capabilities for efficient data management.

→ [Show in github](#)

SELF BALANCING ROBOT

I have successfully made a self-balancing robot using Arduino Uno. This project involved demonstrating my skills in programming and sensor integration, robotics and embedded system development to achieve automated balance.

"KD" FITNESS CENTER (GYM MANAGEMENT SYSTEM)

I've built a gym management system in C# and SQL Server, allowing member management and monthly payments.
